

DBOO Partnership Model

We design, build, own, and operate a lithium plant on your site - turning brines into a new revenue with shared upside.

- No lithium org required
- No equipment handoff
- We earn when you earn

Choose How You Want to Profit

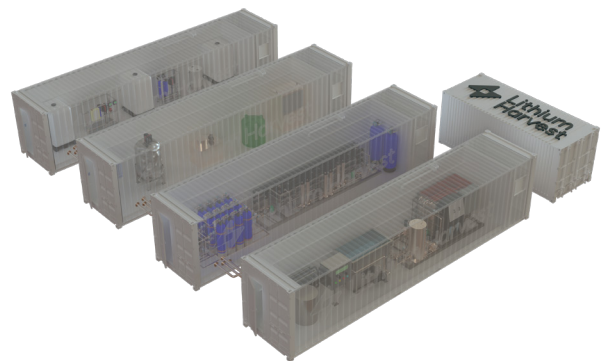

A DBOO project only works when it's crystal clear who brings what. You stay in control of your core assets and operations. We bring lithium know-how, technology, project delivery, and operations. We structure the commercial model around your goals, infrastructure, and risk appetite. Let's build a scenario that turns your brine into profit - on your terms.

	Joint Venture	Royalty License
Overall benefits	A shared-ownership structure where we co-invest in a lithium plant at your site. You participate directly in project profits and position yourself as a pioneer in sustainable lithium and water management.	A service-style model where we invest in and own the lithium plant at your site. You earn royalties from your brine and strengthen your ESG profile through sustainable water and resource management.
Your contribution	Provide treated produced water or brine, site for co-location, SWD well access or equivalent, mineral rights, and an agreed capital contribution at the project level.	Provide treated produced water or brine, site for co-location, SWD well access or equivalent, and mineral rights - no capital contribution to the lithium plant in a standard setup.
Lithium Harvest role	We design, build, and operate the plant using our patented lithium extraction solution. We manage lithium offtake and sales into the battery supply chain and share project returns with you as partners.	We design, build, own, and operate the lithium extraction plant using our patented solution, and pay you agreed royalties linked to production from your brine.

Validated Before FID

- **Validated on your brine:** SVU confirms recovery, product quality, and operating windows.
- **Modeled in a Digital Twin:** SVU data calibrates economics and flowsheet to decision-grade.
- **Performance-tied contracts:** Incentives linked to availability and output.

Validate first. Model fast. De-risk FID.
